F Flag question

@ Edit question

Algoritma A mempunyai running time sebesar 100 log n dan algoritma 8 mempunyai running time sebesar 2n maka running time kedua algoritma tersebut bisa dinyatakan dengan notasi asimtotik ...

one: $(100\log n) \in \Omega(n) \implies (\log n) < n, \text{ bisa Situlis (100 log n)} \in \mathbb{O}(n)$ $(100\log n) \in \Omega(n)$ All of the answers are correct

c. All of the answers are correct Semua jawaban benar

 \bigcirc d. (100 log n) $\in \Theta(n)$

Jawab *notasi asım totik ada 3 yartu O (Sibaca: big Oh), & (dibaca: big theto)

* Such running time bubung annya dg running time lain bis a sinyatata such running time ash dr teliga notasi asimtotik tsbt.

Dengan salah sahu dr teliga notasi asimtotik tsbt.

* Jika running time A < running time B, bisa ditulis (running time A) E O (running time B) time B, bisa situlis (running time A) E II (")

, bisa ditule (running time A) EO(" × Jika running time A & running

Question 2

F Flag question

o Edit question

Running time of algorithm A is 100 log n, and running time of algorithm B is 2n. The running time of these two algorithms can be expressed in asymptotic notation, such as ...

Algoritma A mempunyai running time sebesar 100 log n dan algoritma B mempunyai running time sebesar 2 n, maka running time kedua algoritma tersebut bisa dinyatakan dengan notasi asimtotik ...

 \bigcirc a. $(2n) \in \Theta(\log n)$

() b. $(2n) \in O(\log n)$

C. All of the answers are correct Semua jawaban benar

X d. $(2n) \in \Omega$ $(\log n)$

Jawab: *running time A = 100 log n = kelas log n (kelas logaritmil)
*running time B = 2n = kelas n (kelas linear)

(running time B) > (running time A) jadi

 $(2n) > (\log n)$

sehingga bisa dihihis

 $(an) \in \Omega (log n)$

Question 3 In this pseudocode, which variable that becomes a loop invariant? Not yet arswered Marked out of Dari pseudocode berikut yang menjadi loop invariant adalah... Algorithm arrayMax(A, n)P Flag question Input array A of n integers © Edit question Output maximum element of $currentMax \leftarrow A[0]$ for $i \leftarrow 1$ to n = 1 do if A[i] > currentMax then currentMax - A[i]return currentMax Select one: () a. A[i] b. currentMax

Jawab:

() d. A

* loop invariant adalah variabel yg menjadi kunci dalam suahu berulangan.

* hyuan dari perulangan tsbt adalah untuk mengisi variabe) current Max.

* Shy loop invariantinga adalah variabel current Max

An algorithm has running time 3 n³ + 10 n² + 35 n+10, the asymptotic notation of the algorithm is

Marked out of 1.00

Suatu algorithm yang memiliki running time 3 n³ + 10 n² + 35 n+10, bisa dinyatak

Flag question

Clist question

Select one:

a. All of the answers are correct

Semua jawaban benar

b. (3 n³ + 10 n² + 35 n+10) (n³)

c. (3 n³ + 10 n² + 35 n+10) (n³)

d. (3 n³ + 10 n² + 35 n+10) (n³)

Jawab:

running time algoritma A= 3n3+10n2-35n-10 = telas n3

Ato running time algoritma B = n3

* Karena algoritima A dan B berada dalam satu telas, mata bisa Situlistan:

(3 n3 +10 n2 +35 n+10) 2 (n3)

Shg: (3n³+10 n²+35 n+10) € Ø (n³)

Question 5

An algorithm has running time 2 log n + 3 n + n. Order of growth of the algorithm is ...
